(54) Title: Coiled Heat Exchanger with Anti-Drumming Walls

(57) Abstract: The invention relates to a coiled heat exchanger, comprising a plurality of tubes, which are wound around a core tube (1) in order to form several concentric layers of tubes (51, 52, 53, 54), and comprising a container casing, which delimits an outer space around the tubes. A first anti-drumming wall (11) exhibits the shape of a cylinder casing or a cylinder casing segment and is arranged on the external side of a first layer of tubes (51).

(81) Designated states (*unless stated otherwise, for any kind of protection available under the national law*): [see original]

(84) Designated states (*unless stated otherwise, for any kind of protection available under the regional law*): [see original]
